Streamline Radiology Operations Through Analytics

Consolidate Your Data Across Systems With One Vendor Agnostic, Interoperable Platform

Bialogics DImax seamlessly integrates into all radiology Informatics systems including RIS/PACS, EHR, voice dictation and more, consolidating data silos and message protocols into one single structured AI ready solution for Business Intelligence and Machine Learning

The Problem Of Inefficient Internal Reporting Processes

Today, Radiology relies on an inefficient, time-consuming processes to generate operational reports for both internal and government reporting purposes. Administrators and even senior leadership must dedicate valuable hours to manually analysis weekly or bi-weekly reporting – interfering significantly with time spent on more critical operational responsibilities.

Unrivaled Workflow Clarity

Bialogics works to uncover hidden data siloes and harmonizes imaging data across IT systems to ensure accurate, consistent data while simultaneously providing live workflow analysis, including T-A-Ts and Wait-Times based on WTIS reporting requirements.

Texas Children's Hospital reported cost saving of $400,000 in immediate saving by freeing up operational personnel by eliminating regular manual reporting processes and improving reimbursement s with accurate data reporting.

Using Bialogics Analytics to measure and evaluate actual procedure times, optimization of appointment times for Ultrasound Procedure generated the potential for an increase of 912 exams annually and potential billing of $73,735 in Technical Fees

The 80/20 Rule For Data Analysis

Today, it is often observed that 80% of the time is spent locating, extracting, and building datasets necessary to measure routine operational and performance metrics. This leaves only 20% of time left in order to make sense of this data through slicing and dicing it into analyzable reports. The difficulty of this task is compounded by the fact that frequently key metrics are either not represented or are inaccurate.

Bialogics flips the issue thanks to real-time operational performance and workflow analytics. Departments can automate their data collection through scheduled reporting and place their focus back on making impactful decisions.
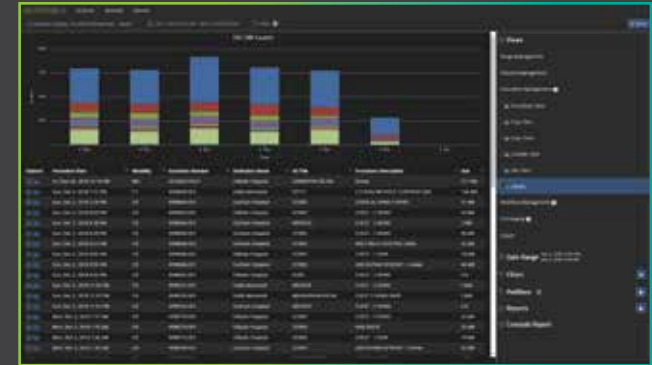

An Exceptional Offer With An Immediate ROI

To mark the release of Bialogics latest next-generation software, DImax V3, Bialogics has created a limited time introductory offer.

Bialogics Payment models are made to meet your departments needs with a low-cost monthly subscription model for standalone Health Institutions, or a SaaS fee per exam model shared across a multi-site Regional Health Center. We are confident that with only a 1-month implementation period, you will be recovering the investment and much more, all the time improving valuable efficiencies and patient care.
