- • Tracks and Reports on all Internet Bandwidth and Connections
- • Identifies all Internet Applications and Users for Internet abuses
- • Pinpoints network and application performance issues
- • Eliminates Gateway Security Threats
- • Hardware lifecycle Management - PresiNET Provides the Firewalls
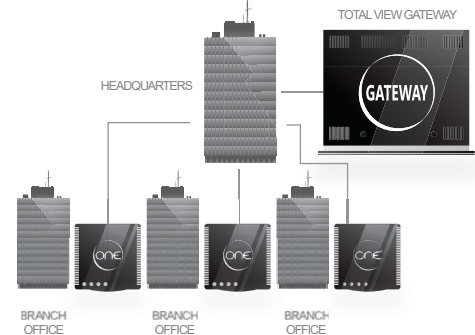

Tough and Smart

TOTAL VIEW ONE's firewalls and VPN gateways are integrated hardware/software appliances designed to provide proactive protection.

PresiNET's Advanced Security Intelligence Analysis and Secured Operations Center makes this service smart enough to continually adapt to new security threats.

PresiNET's Secure Operations Center

TOTAL VIEW ONE uses Connection Tracking to identify security threats that would otherwise go undetected.

PresiNET's Security Gateway Service includes the firewall appliance, and was designed for small and medium sized organizations that require a strong security solution. PresiNET provides 24x7x365 Firewall Event Management, Security Information, Internet Visibility and Intelligence from our SOC where the firewall data is analyzed, correlated, and posted to the Web portal for your review.
